Pilots & Volunteers attending the Applegate Open (Open, Sprint, or Superclinic) get a special discount on an Alfapilot RS bundle!

The bundle includes a screen protector, case, and 64GB SD card pre-loaded with maps and elevation files for the USA, many other worldwide flying sites, and the waypoints for Applegate. The discounted price is \$599. Go to <https://www.flyxc.org/alfapilot.html> . Order now so you can get it in time to get familiar with it prior to the event!

The Alfapilot RS is the best, most readable integrated mapping / vario on the market, and a great compliment on your flight deck to a Flymaster or Flytec device. It includes a super accurate GPS (including GLONASS), multi-sensor Vario with customizable sound, and a highly readable e-ink Display with fully customizable screens. 3 separate flight modes each with their own screens, XC triangle assistant, airspace maps and warnings, the ability to share waypoints and tasks between devices, thermal “memory” that shows thermals from the current and previous flights on the map...the list of features is too long to mention them all. ***This is the device you want when you are flying XC or doing competitions.***
